Make yourself more resilient to cyberattacks with Dell Trusted Devices.

Attacks are inevitable. In fact, 69% of organizations report a cyber-attack due to a poorly managed internet-facing asset in the prior 12 months.* Dell Technologies understands that today's security challenges include managing an evolving threat landscape with a modern work environment in mind. With Dell commercial devices, catch and repel malicious activity before it compromises your system. Latitude, one of the industry's most secure commercial PCs**, offers layers of security features to keep you protected and give you visibility to threats for swift action.

Secure anywhere-work with hardware and firmware defenses built for our hyper-distributed world.

Stay protected from evolving threats

Our unique BIOS and firmware verification provides greater security than other PCs. Assess a corrupt BIOS, repair it and gain insights that reduce exposure to future threats.

Spot ticking timebombs

Indicators of Attack, an early-alert feature offered only by Dell, scans for behavior-based threats before they can do damage.

Detect chassis tampering

Detect unauthorized access, e.g., malicious implanted hardware or software, data/component theft inside system chassis.

Secure end user credentials

SafelD, a dedicated FIPS Level 3 certified security chip, keeps user credentials hidden from malware.

Be safe from first boot

Rigorous, state-of-the-art supply chain controls reduce the risk of product tampering. Optional additions like the Dell-unique Secured Component Verification provide additional assurance of device integrity.

Protect data everywhere

Stay protected against advanced threats with optional software-based protections from our ecosystem of best-of-breed partners (CrowdStrike, VMware Carbon Black, Secureworks, Netskope and Absolute).
