Add LDAP to Apple Contacts

In order to search for NYP contacts using your Apple Mail client, you will first need to add the LDAP directory to the Contacts application (called Address Book in OS 10.7 and earlier).

1. Open the Contacts application.
2. Click Contacts in the menu bar, and select Preferences.
3. Click the Accounts tab.
4. Click + at the bottom-left corner of the window.
5. Choose LDAP from the Account type pull-down menu.
6. Type ldap.med.cornell.edu in the Server address field, and click Continue.
Add LDAP to Apple Contacts

7. Enter **ou=people, o=med.cornell.edu** in the Search base field.

8. Choose **Subtree** from the Scope pull-down menu.

9. Choose **None** from the Authentication pull-down menu.

10. Click **Create**.

11. You have now successfully added the LDAP directory to your Contacts. To find NYP contacts, create a new email message, and type the person’s name into the **To:** field.
